[FILL: Optional subtitle]

[FILL: Author One]^{*1} and [FILL: Author Two]^{†2}

¹[FILL: Affiliation or “Independent Researcher”]

²[FILL: Affiliation]

Submission profile

Schema	GLOSA-7SSA Global Scholarly Publication Schema v1.0 (2026-09-25)
Target system	[FILL: Q1 World / Thai leading journal / repository working paper]
Target venue	[FILL: journal / venue]
Article type	[FILL: conceptual / theory / review / legal / formal / SoK / policy / other]
Journal policy last checked	[FILL: YYYY-MM-DD]
Corresponding author	[FILL: name, email]
Manuscript status	[FILL: draft / preprint / submitted / revision]
Registration / protocol / preregistration	[FILL: DOI/URL/id or N/A]
Repository / archival record	[FILL: DOI/URL or N/A]

Abstract

[FILL: 150–250 words, adapted to the target journal.

Functional order: (1) important problem; (2) exact limitation/gap; (3) approach or scholarly method; (4) principal new contribution; (5) main implication and one important boundary/limitation.

Do not claim evidence, novelty, causality, validation, or generality beyond the body of the manuscript.]

Keywords: [FILL: 4–8 terms]

Core Epistemic Structure

Per `methodology/P20_core_epistemic_structure.md`: who brought the world in, who bridged, and which machines took part — three roles, never merged (non-collapse rule below). Registration is an attribution device, not a certification of truth or expertise.

Core Respondent / Experience-Based Expert: [FILL: name or anonymised role] — [FILL: lived experience; selections; interpretation]

*ORCID: [FILL]

†ORCID: [FILL]

Interactional Expert: [FILL: name / role, or **None**]

AI Model(s) Used: [FILL: Model 1 — role]; [FILL: Model 2 — role] (role disclosure only; never authorship)

Non-collapse rule: Experience-Based Expertise $\neq$ Interactional Expertise $\neq$ AI Model.

1 Introduction

1.1 Problem and phenomenon

[FILL: State the phenomenon or intellectual problem without smuggling the proposed answer into the problem statement.]

1.2 Why the problem matters

[FILL: Explain why the target field or readership should care. Separate disciplinary importance from local/practical importance.]

1.3 Scholarly conversation

[FILL: Locate the active conversation, including the closest international and, where relevant, Thai/local scholarship.]

1.4 Unresolved tension

[FILL: Preview the contradiction, missing mechanism, conceptual ambiguity, boundary failure, assumption failure, new phenomenon, or other scholarly gap.]

1.5 Central argument and contribution

Central argument. [FILL: one sentence beginning, if useful, “We argue that ...”]

Contribution. [FILL: name the new intellectual object: construct, distinction, theory, framework, mechanism, taxonomy, ontology, architecture, formalization, interpretation, legal principle, or research agenda.]

Roadmap. [FILL: optional; follow target-journal style.]

2 Approach, Scope, and Knowledge Base

2.1 Scholarly method

[FILL: conceptual analysis / theory construction / philosophical argument / integrative synthesis / doctrinal legal analysis / formal method / systematization of knowledge / critical review / policy analysis / other.]

2.2 Scope and exclusions

- Domain/population/object: [FILL]

- Geography/jurisdiction: [FILL]
- Time window: [FILL]
- Languages/source families: [FILL]
- Explicit exclusions: [FILL]

2.3 Knowledge-base construction

[FILL: databases/search routes, canonical sources, target-journal literature, adjacent disciplines, local literature, source-acquisition logic, and how sources were verified.]

2.4 Literature-review mode

Select honestly:

FILL Targeted scholarly search

FILL Integrative review

FILL Systematic review / scoping review / SoK (only if protocol supports it)

FILL Doctrinal/legal corpus

FILL Archival/historical corpus

2.5 AI involvement in the research process

If AI affected the research process (not merely manuscript language), describe here the tool/model, version or release identifier when available, provider, date(s) of use, research stage, inputs, outputs, validation, and retained logs. The public declaration in Section 7 summarizes manuscript-level AI use; this subsection gives method-level reproducibility detail.

Glosa compatibility rule

AI-generated content is never treated as evidence merely because the model produced it. AI-discovered or AI-suggested claims, sources, analyses, code, or interpretations enter the manuscript only after the relevant human/source/ formal/computational verification route has been completed and logged.

3 Existing Knowledge and Theoretical Foundation

3.1 Key constructs

[FILL: Define the constructs used by the argument; distinguish neighboring constructs and levels of analysis.]

3.2 Major theories or positions

[FILL: Organize by problems/positions/mechanisms, not by a chronological “Author A said; Author B said” list.]

3.3 Nearest intellectual neighbors

[FILL: Identify the strongest prior theory/framework/method that could make this paper unnecessary.]

3.4 What is already established

[FILL: State K0—the knowledge state before this paper—with claim-matched citations.]

4 Problem in Existing Knowledge

4.1 Exact inadequacy

Select and justify one or more:

- conceptual ambiguity;
- contradiction;
- missing mechanism;
- fragmented literatures;
- unclear boundary conditions;
- hidden/failed assumption;
- formalization gap;
- classification gap;
- level-of-analysis gap;
- normative or doctrinal gap;
- new phenomenon not handled by existing theory.

4.2 Why the inadequacy matters

[FILL: What can the field not explain, distinguish, justify, predict, organize, or decide because of this problem?]

4.3 Strongest prior attempt

[FILL: Treat the strongest existing solution charitably. Explain why it is still insufficient without manufacturing a gap.]

5 New Contribution

5.1 Name and definition of the contribution

Name: [FILL]

Type: [FILL: construct / distinction / mechanism / theory / framework / taxonomy / ontology / architecture / principle / formalization / interpretation]

Definition: [FILL]

5.2 Components and relations

[FILL: Explain nodes, entities, dimensions, mechanisms, transitions, or inferential steps.]

5.3 Derivation

[FILL: Show how the contribution follows from Sectors 3 and 4 rather than appearing as an unsupported diagram.]

5.4 Propositions, principles, or formal statements

1. P1: [FILL]
2. P2: [FILL]
3. P3: [FILL]

5.5 Comparison with nearest prior framework

[FILL: same / different / extends / challenges. Avoid unsupported priority claims such as “first ever” unless an adequate search supports them.]

6 Critical Evaluation, Boundaries, and Implications

6.1 Strongest objection

[FILL: State the strongest plausible objection in a form its proponent would recognize.]

6.2 Alternative explanation or rival theory

[FILL]

6.3 Counterexample or failure case

[FILL]

6.4 Response and repair

[FILL: Defend, revise, or narrow the contribution. A narrow honest theory is better than an unfalsifiable broad one.]

6.5 Boundary conditions

[FILL: Where should the contribution apply? Where should it not apply?]

6.6 Limitations

[FILL: epistemic, conceptual, methodological, empirical, legal, cultural, technical, data, AI, and generalizability limits as applicable.]

6.7 Implications

- Theoretical implications: [FILL]

- Methodological implications: [FILL]
- Practical/professional implications: [FILL or N/A]
- Policy/governance implications: [FILL or N/A]
- Future research: [FILL]

7 Conclusion

Answer to the original problem

[FILL]

Before → After

Before this paper:

[FILL: what the field could not adequately distinguish/explain/organize.]

After this paper:

[FILL: the precise new capability supplied by the contribution.]

What this paper does not claim

[FILL: explicit non-claims.]

Next frontier

[FILL]

Statements and Declarations

Author contributions (CRediT)

CRediT role	Contributor(s)
Conceptualization	[FILL]
Data curation	[FILL / N/A]
Formal analysis	[FILL / N/A]
Funding acquisition	[FILL / N/A]
Investigation	[FILL / N/A]
Methodology	[FILL]
Project administration	[FILL / N/A]
Resources	[FILL / N/A]
Software	[FILL / N/A]
Supervision	[FILL / N/A]
Validation	[FILL]
Visualization	[FILL / N/A]
Writing – original draft	[FILL]
Writing – review & editing	[FILL]

Authorship and accountability

[FILL: Confirm that every listed author satisfies the target journal’s authorship criteria, approved the submitted version, and accepts responsibility for the work. AI systems/tools are not listed as authors.]

Declaration of generative AI and AI-assisted technologies

Public summary. During the preparation and/or research process for this work, the author(s) used [FILL: tool/service/model] for [FILL: purpose and research/manuscript stage]. The author(s) reviewed, verified, and edited all material as required and retain full responsibility for the submitted work.

Detailed disclosure record.

Field	Disclosure
Tool/service	[FILL: product/service/model]
Provider/developer	[FILL]
Model/version/release	[FILL: where available]
Dates accessed	[FILL]
Use category	[FILL: ideation; information discovery; refinement; translation/editing; analysis/recommendation; code generation/optimization; visual/media creation; other]
Research/manuscript stage	[FILL: question; literature; design; code; data; analysis; visualization; drafting; review; submission preparation]
Purpose	[FILL]
Extent/influence	[FILL: did it affect central arguments, methods, results, or conclusions?]
Input-data class	[FILL: public / licensed / internal / confidential / personal / sensitive / unpublished / copyrighted / none]
Prompt/settings retained	[FILL: yes/no; location; explain any lawful/privacy redactions]
Outputs retained	[FILL: yes/no; location]
Human verification	[FILL: what was checked; against what independent source/method]
Human checker/approver	[FILL]
Citation verification	[FILL: source-first verification route]
Code verification	[FILL: tests/oracle/review, or N/A]
Visual-content verification	[FILL: underlying verifiable source/data, or N/A]
Privacy/IP/terms check	[FILL]
Material effect on conclusion	[FILL: none / limited / substantive; explain]

Non-delegation statement. Human author(s) retain responsibility for the scholarly argument, interpretation, source verification, authorship decisions, and final submission. AI output is not used as a primary scholarly source and is not treated as evidence merely because it was generated.

Funding

[FILL one: (a) This work received support from [funder, grant number], and the funder had [role/no role] in [design/analysis/writing/decision to submit]; or (b) The authors received no specific funding for this work.]

Competing interests / conflict of interest

[FILL: Declare relevant competing interests, or state that none are declared.]

Ethics approval and research integrity

[FILL according to the work: - approving REC/IRB/ethics body and approval number; - waiver/exemption and basis; - for a purely conceptual/review paper with no new human/animal data, state the applicable N/A rationale; - for community/indigenous/culturally sensitive knowledge, identify relevant consent/governance route where applicable.]

Consent to participate

[FILL: approval/consent details or N/A.]

Consent for publication

[FILL: consent for identifiable material, quotations, images, case details, or N/A.]

Data availability

[FILL one: - data DOI/repository and access conditions; - restricted data + justified access route; - no new data were created or analyzed; - all data are contained within article/supplement.]

Code and software availability

[FILL: repository, commit/tag, license, environment/lock file, DOI, or N/A.]

Materials, protocol, and preregistration

[FILL: protocol DOI/registration, materials repository, preregistration id, or N/A. Do not imply preregistration if the protocol was frozen after results were seen.]

Reproducibility and verification

[FILL: identify what another scholar can inspect or rerun: search manifest, source ledger, theorem proof, software environment, data pipeline, analysis script, simulation, benchmark, claim-evidence matrix, etc.]

Intellectual property, permissions, and third-party material

[FILL: permissions/licenses for copyrighted figures/tables/text/data; patent or confidential-information considerations; or N/A.]

Dual-use, safety, and biosecurity statement

[FILL where relevant: safety review, controlled details, risk mitigation, or N/A.]

Acknowledgements

[FILL: people, organizations, facilities, language/editorial assistance, non-author contributors, and permissions to acknowledge where required.]

Prior dissemination, preprint, and overlapping publication

[FILL: preprint/working-paper DOI, conference abstract, thesis chapter, translation, prior version, or state none. Explain material overlap.]

Reporting guideline

[FILL if applicable: PRISMA, CONSORT, STROBE, CARE, SRQR, COREQ, ARRIVE, TRIPOD, CHEERS, etc.; otherwise N/A.]

A Glosa audit profile

A. Core epistemic roles

Experience-based / core respondent

[FILL: who brought the world/problem in]

Interactional expert / bridge

[FILL or None]

AI model(s)/tool(s)

[FILL: model + role]

Human accountable author/approver

[FILL]

Non-collapse:

Experience-Based Expertise $\neq$ Interactional Expertise $\neq$ AI Model.

B. Standpoint and competence boundary

Standpoint: [FILL]

Disciplines/competencies explicitly not claimed: [FILL]

Local/practice knowledge scope: [FILL]

C. Question round trip

Question as lived

[FILL: verbatim human wording]

Question as readout

[FILL: what is actually observed/distinguished]

World-language hypothesis

[FILL]

Falsifier

[FILL: what record would defeat/narrow the claim]

B Claim Matrix

ID	Claim	Evidence/formal support	Tier	Produced by	Responsible
C1	[FILL]	[FILL]	[FILL]	human/AI/joint	human
C2	[FILL]	[FILL]	[FILL]	human/AI/joint	human

C Five-question claim audit

For each load-bearing claim record:

1. **seen:** what was actually observed/opened/executed;
2. **separates:** what that record distinguishes;
3. **ai_filled:** what AI added;
4. **assumed:** what was taken as given;
5. **tested:** what independent check was run.

ID	seen	separates	ai_filled	assumed	tested
C1	[FILL]	[FILL]	[FILL]	[FILL]	[FILL]
C2	[FILL]	[FILL]	[FILL]	[FILL]	[FILL]

D AI route-level disclosure and silent-lift audit

Audit category	Record
Current evidence supplied/handled by AI	[FILL / none identified]
Retrieved tool evidence	[FILL / none identified]

Audit category	Record
Retained-record route	[FILL / none identified]
Model/calibration as-sumption	[FILL / none identified]
Prompt/system constraint	[FILL / none identified]
Decision policy proposed by AI	[FILL / none identified]
Represented dependency set	[FILL]
Actual dependency set	[FILL]
Silent-lift flags	[FILL: none / list]
Human completeness judgment	[FILL]

E Literature Review System record

Stage	Required artifact	Status
L1	Frozen question/scope	[FILL]
L2	Search protocol / honest review mode	[FILL]
L3	Acquisition log	[FILL]
L4	Source reading/extraction records	[FILL]
L5	Metadata + claim-match verification	[FILL]
L6	Manifest + neighbour/dialogue table	[FILL]

Accuracy gate: [FILL: PASS / PASS WITH LIMITS / FAIL]

Diversity gate: [FILL: PASS / PASS WITH LIMITS / FAIL]

Secondary-citation audit: [FILL]

Retraction/correction check: [FILL]

Review-mode claim: [FILL; never call targeted search “systematic”]

F Blackbox Note and transformation log

ID	Role	Kind	Verbatim retained human line	Became
BB-001	[FILL]	[FILL]	[FILL: exact retained wording]	[FILL: claim/rule]

Step	By	Input	Transformation / output
[FILL]	human/AI/joint	[FILL]	[FILL]

G Knowledge state and independence

Overall K-state: [FILL]

Highest claim tier: [FILL]

Independence class(es): [FILL]

Known route dependence: [FILL]

Claims on HOLD/Open: [FILL]

H Human Mastery Gate

Before submission/public release, the human accountable author should be able to defend without AI assistance:

1. the problem;
2. major literature families;
3. closest constructs/frameworks;
4. the precise inadequacy;
5. the proposed mechanism/argument;
6. boundary conditions;
7. strongest counterargument;
8. strongest counterexample;
9. falsifying record;
10. discriminating empirical/formal test where relevant.

Gate status: [FILL: PASS / PASS WITH NAMED GAPS / NOT READY]

Named gaps: [FILL]

I Pre-publication adversarial gate

Gate	Check	Status
R1	Leak/privacy/confidentiality scan	[FILL]
R2	License, copyright, permissions, and IP coverage	[FILL]
R3	Claim-tier / evidence-strength fidelity	[FILL]
R4	Citation accuracy and source-match recheck	[FILL]
R5	Lineage / anchor-preservation audit	[FILL]
R6	Overclaim/register scan (contaminated-concept table)	[FILL]
R7	Completeness / dangling-reference / supplement check	[FILL]
R8	Human Mastery Gate	[FILL]
R9	Authorship + CRediT + acknowledgements consistency	[FILL]
R10	Funding + competing-interest disclosure completeness	[FILL]
R11	Ethics/consent/data/code/protocol declarations	[FILL]
R12	AI public disclosure matches internal AI-use log	[FILL]
R13	Target-journal current policy checked	[FILL]
R14	Confidential peer-review material not exposed to non-permitted AI	[FILL]
